Code in Python

```
# Hash Table using Chaining

table = [[] for i in range(10)]

# Insert a key-value pair
def insert(key, value):
    index = key % 10
    table[index].append((key, value))

# Search for a key
def search(key):
    index = key % 10
    for k, v in table[index]:
        if k == key:
            print("Value =", v)
            return
    print("Key not found")

# Delete a key-value pair
def delete(key):
    index = key % 10
    for item in table[index]:
        if item[0] == key:
            table[index].remove(item)
            print("Key deleted")
            return
    print("Key not found")

# Insert
n = int(input("Enter number of elements: "))

for i in range(n):
    key = int(input("Enter key: "))
    value = input("Enter value: ")
    insert(key, value)

# Search
key = int(input("\nEnter key to search: "))
search(key)

# Delete
key = int(input("Enter key to delete: "))
delete(key)

# Display
print("\nHash Table:")
for i in range(10):
    print(i, ":", table[i])
```
